

Human IGFBP7 mouse monoclonal antibody (20D8)

Catalog PODI-0073

Product specification sheet PS-PAb0073

Product description

Insulin-like growth factor (IGF) binding proteins have a role in shuttling and regulation of IGF molecules. Members of the IGFBP family bind with different affinities. IGFBP7 is a secreted protein that binds to IGF-I and IGF-II with a relatively low affinity. It has been shown to be implicated in apoptosis of certain cancerous cells, and to be an early marker for acute kidney injury and renal recovery after cardiac surgery.

Two anti-IGFBP7 monoclonal antibodies are available. Clone 20D8 is well suited for ELISA (recommended dilution 1:1000), clone 24 is superior in detecting denatured protein by Western blot.
