## Catalog UCS014

Lot 4228
product specification sheet: PS-S014

## Product description

This product contains the receptor binding domain (RBD) of the spike glycoprotein protein (S-protein) of the SARS-CoV-2 corona virus. Infection with this virus causes COVID-19 disease. The spike protein is the common target for neutralizing antibodies and vaccines. The Spike protein contains two subunits, S1 and S2. Subunit S1 contains a receptor binding domain (RBD), which is responsible for recognizing and binding with the cell surface receptor ACE-2 (products A004 and A005). S2 subunit contains other basic elements needed for the membrane fusion and trimerisation.

Label:
S014 SARS-CoV-2-RBD-(TEV-Fc-AVI)C_w/o-Biotin
$2,29 \mathrm{mg} / \mathrm{ml}$ in PBS
project 2020_038, Batch 4228
The protein is produced in HEK293 cells and contains a C-terminal, TEV-protease cleavable Fc-AVI-tag, which can be used for in vitro site-specific biotinylation, using the BirA enzym. It was purified to homogeneity (figure 1). The calculated molecular weight of recombinant SARS-CoV-2-RBD-(TEV-Fc-AVI)C is 104 kDa .

## Use, storage and stability

The product should be stored at $-80^{\circ} \mathrm{C}$ (stable for at least 1 year). The buffer contains PBS without preservative. After thawing it should be stored in appropriate small aliquots at $-20^{\circ} \mathrm{C}$ or $-80^{\circ} \mathrm{C}$ (stable for at least 2 months).

## PRODUCT USE LIMITATIONS, WARRANTY, DISCLAIMER

The product is not for use in humans
The product can only be used for internal research and development
The product can not be used in any commercial activity (commercial use includes, but is not limited to R\&D activities for third paries)
The product can not be resold.
Please contact bd@immunoprecise.com to inquire about further information.
